

# Be ready to roll for a **FUN** and **SAFE RV getaway**

## Know Stopping and Turning Distances

More than **15%** of claims are from failing to correctly stop or turn. RVs need more distance to brake and width to turn.

## Inflate and Check Tires

**60%** of claims are from tire failure from wear, unbalanced weight and other factors. RVs might sit for a while so look for tire damage to avoid blowouts and make sure tires are properly inflated.

## Balance the Load

Pack evenly and avoid overloading one section. Unbalanced RVs cause sudden blowouts, breakdowns and restrict braking and steering.

## Measure Heights

**10%** of claims are from roof damage. So find the highest point of your RV and plan your route so you don't get stuck in overpasses, bridges or tunnels.

## Share the Driving

Driving long distances can cause fatigue. Have a driving buddy or take a break when you get drowsy. Always wear your seat belt and don't text and drive.
